

ANALYSIS OF GENDER REPRESENTATION IN FILM ADVERTISING ACROSS AFRICA

Overview

Advertising plays an important role in the development of societal identity. This identity can be negatively impacted by stereotypes but awareness of the existence of negative stereotypes is a valuable tool in changing the communication landscape.

The Loeries, Africa and the Middle East's premiere brand communication festival, is perfectly positioned to be able to unearth examples of stereotypes in advertising and be a part of the process of assisting the brand communication industry in tackling these issues.

The first step in the process is the inaugural research into gender representation across the African continent. The Loeries receives a substantial number of entries that act as a representative sample of the work being done on the continent.

The goal of this research is two-fold:

- 1. To act as dipstick research of the state of the industry.
- 2. To serve as the start of the building of a normative database of gender representation.

Research Methodology

Sample:

- The research sample was based on the submissions into the Film category of the Loeries 2020 awards.
- The final sample consists of 412 films post analysis of various requirements to deem them as brand communication.

Methodology:

- The films were put through a robust research process that involved multiple verification steps that analysed both screen time and speaking time by gender.
- Post an overall analysis, the films were further analysed by various verticals.

The end result was a robust view of the overall film communication landscape across Africa as well as the representation of male and female roles in various verticals.

Quote from Facebook

"If we want to eliminate harmful stereotypes in our industry, we need to stop thinking it is someone else's job. Creating long-term and meaningful change requires collective action. Partners such as the Loerie Awards are key to this and we look forward to continuing to support their work, as well as collaborate with brands and agencies to highlight this issue and create practical ways to address it." - Elizma Nolte, Head of Marketing at Facebook Africa.

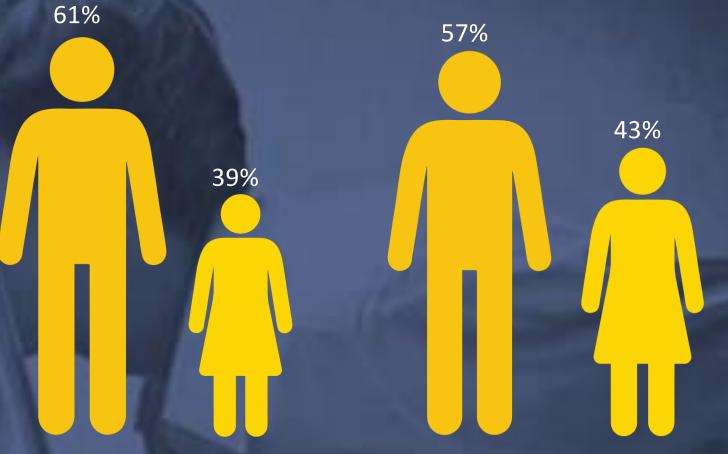

OVERALL SPEAKING AND SCREEN TIME

representation by gender

Men overwhelmingly dominate both Speaking Time (61%) and Screen Time (57%).

Women have 39% Speaking Time and 43% Screen Time. This 4% points difference indicates that women are used as "props" in some ads.

Summary

The inaugural Loeries Analysis of Gender Representation in Advertising across Africa has unearthed some interesting insights.

Key is that men still dominate the advertising landscape, when looking at the Film category.

There are some categories that show women with an advantage in both Speaking Time and Screen Time:

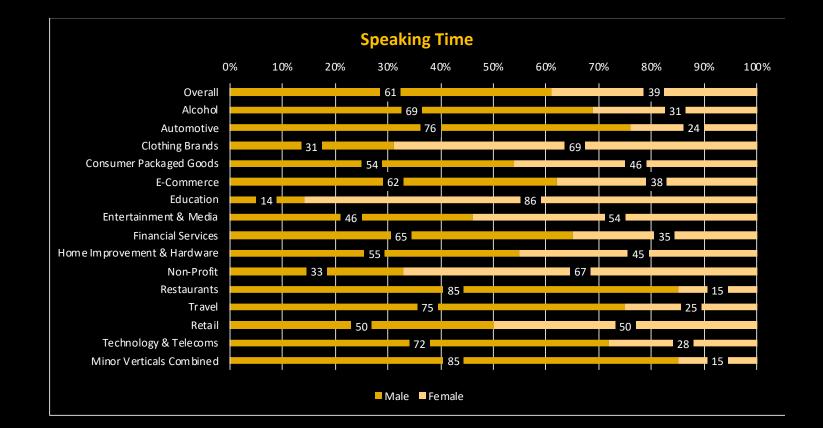

- Clothing brands
- Education
- Entertainment and Media
- Non profit

The key challenge is that this only represents 25% of the research categories and leaves out major commercial categories which attract the greatest share of advertising revenue.

Overall, there exists a strong potential for improvements in a number of verticals and the Loeries will continue to monitor and educate the industry about improvements in these areas.
